Potential Mobile Bird Rehabilitation Unit (MRU) Deployment Locations in Coastal Counties

In general, the following deployment site needs (established for a single MRU) should be considered prior to deploying mobile oiled bird rehabilitation units:

1. Interior space: 10,000 ft² of concrete or asphalt (not gravel) under cover, ideally with loading dock. If interior space is not available then combine this space requirement with Item 2, below.
2. Exterior space: 5,000 ft² of concrete or asphalt (not gravel) adjacent to interior space above.
3. Parking spaces for 6 semi-trailers adjacent to above. Two spaces will be designated for fixed-axle (20,000 gal) water tanks.
4. Parking spaces for 40 personal vehicles (staff, visitors, etc.)
5. On-site fresh water: Hydrant is the preferred option. Note: the estimated minimum volume of freshwater required over the duration of a response will be 50,000 gal total (18,000 in pools, 30,000 for wash/rinse, 2,000 wash down). Note that this assumes pool water filtration and reuse is accomplished. Also, water hardness must test to (or be adjusted to) 2-5 gr.
6. Vehicle access for a semi-tractor and trailer.
7. Ability to deploy perimeter fencing with locking gates.
8. Security: 24/7 security of site will need to be established.
9. Restrooms/break rooms (serving 30 persons) will be required on site.
10. Personnel support: Motel and restaurant (serving 30 persons) should be located within reasonable distance of deployment site.
11. Local services: Bulk propane supplier and equipment rental (esp. generator and fencing) should be available within a reasonable distance of the deployment site.

The following locations are believed to meet the above location requirements and may be available for use in the deployment of the mobile oiled-wildlife rehabilitation units (MRUs). Note that not all locations may be suitable for drill deployments due to a lack of sufficient interior space.
